

Storage Assessment

Free assessment for customers who require a tech refresh of an existing Storage Array. The assessment covers the review of capacity, performance and integration in the production environment with best practice guidance on a suitable new solution.

Scope

Ultima can provide a high-level review for storage arrays to analyse the following aspects:

- Performance, capacity utilisation and resiliency
- Data protection for snapshots and replication
- Integration with operating systems and hypervisors
- Block and file storage types
- iSCSI or Fibre Channel Storage Network

Engagement Approach

We adopt a simple 3-stage process, allowing us to review and recommend a new solution.

- 1 Discovery workshop to determine future requirements and deployment of data capturing tooling
- 2 Analyse the information gathered and review suitable solutions
- 3 Report on recommendations and proposed options for the new solution

Storage Assessment Summary

Key Benefits

- Simple report to review for options and costs
- Expert guidance from experienced presales consultants
- Wide selection of best of breed vendors

Dependencies

- Deployment of data capturing tools on a Windows server or a preconfigured vSphere VM
- Access to technical team and an executive sponsor

Key Deliverables

- Discussion and write-up of requirements and data output
- Proposal report detailing summary findings and recommendations with costed options
- Teams session to review the report

What can you expect?

The assessment can be tailored to meet your specific requirements where possible. Generally speaking the process is as follows:

- 1 Discover**
 - 30-60 min discovery session
 - Deploy tools
- 2 Analyse**
 - 1-4 week data capturing and analysis
- 3 Report**
 - Report sent
 - 30-60min review session
