# Navigate the data deluge

Protect data everywhere in the age of cyber threats.

With data growing exponentially and workloads fragmenting across multiple platforms, businesses have a much larger attack surface for cyber criminals to exploit.

Using Commvault Intelligent Data Services from Ultima, you can secure your data, drive your data strategy, protect against ransomware and accelerate growth.

Ultima **COMMVAULT**

Data flood

Not only is data proliferating but it's getting distributed across multiple on-premises, hybrid-cloud and multi-cloud environments, making control more complex. Plus, with data regulations tightening, the time for a unified approach to data management is now.

35%
By 2027, 35% of application workloads will not be optimal or ready for cloud delivery, down from 55% in 2022.[1]

70%
By 2025, 70% of organisations will implement structured infrastructure automation to deliver flexibility and efficiency, up from 20% in 2021.[2]

Over 75%
Gartner predicts that by 2024, over 75% of the world's population will have its personal information covered under modern privacy regulations.[3]

Need for Continuity Planning

As businesses rely more heavily on their data and the attack surface has grown, the risk of outages or cyber criminals disrupting operations has increased dramatically. Yet, many organisations still don't have a robust continuity plan in place to maintain critical functions against disasters.

75%
The number of small businesses that don't have a recovery plan, while 60% that suffer a data loss event within six months will be forced to close.[4]

Over 80%
The number of UK organisations that experienced a successful cyberattack in 2021/2022.[5]

Ransomware: The #1 Cyber Threat

With a new ransomware attack on business every 39 seconds,[6] it's no wonder it's become a priority for companies. What's more, when the average ransom payment to unencrypt data is around £4.7million, it's a problem few organisations can afford.
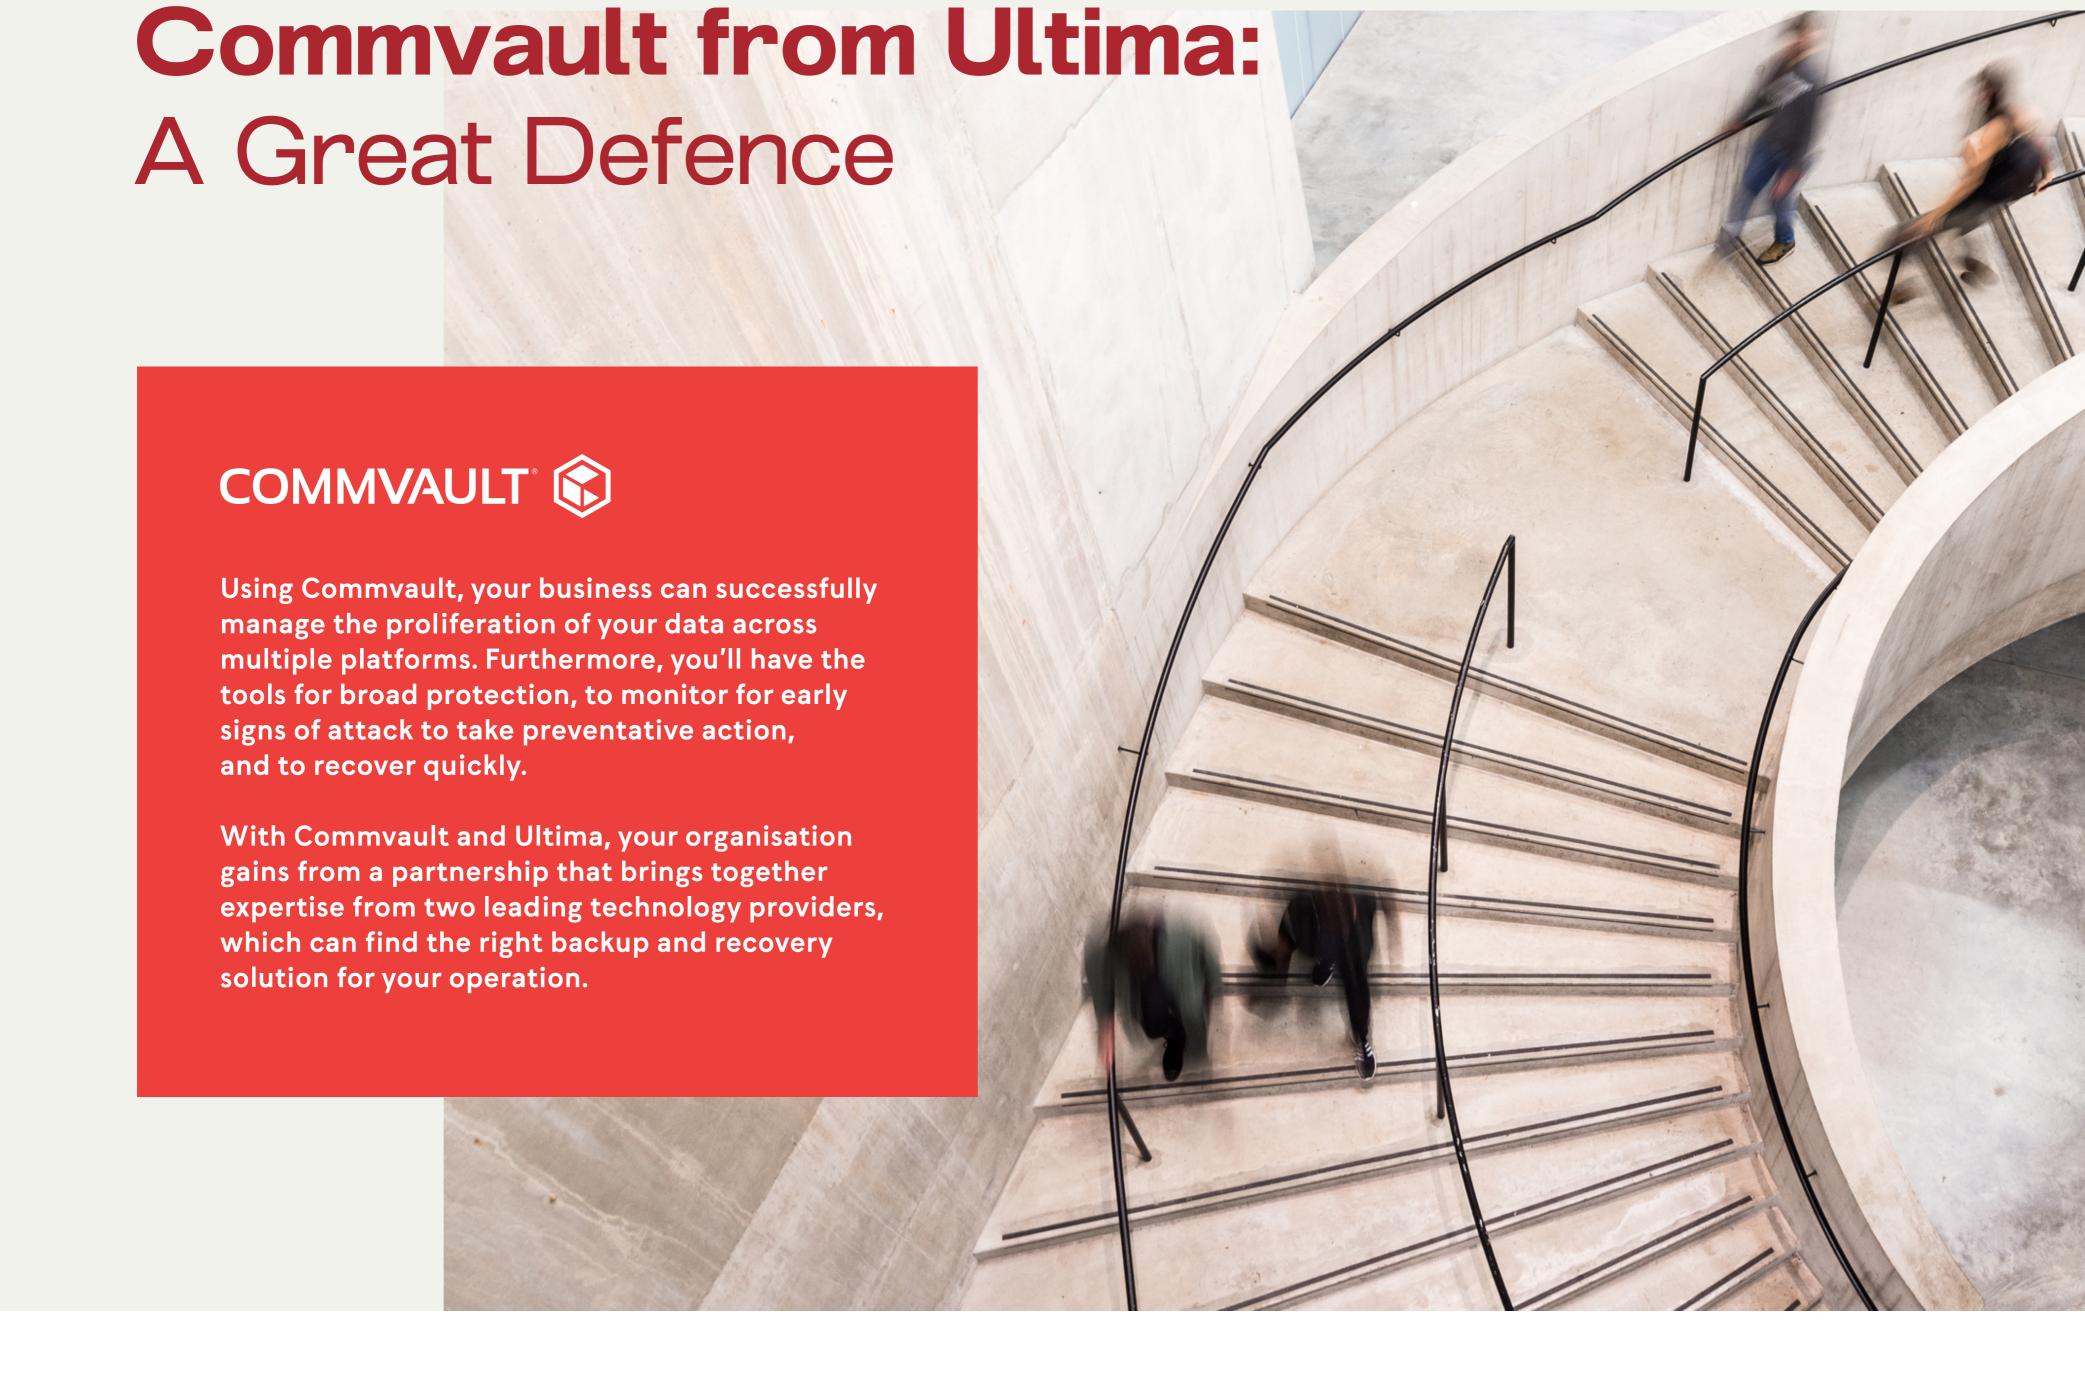

93%
Of ransomware attacks attempted to destroy backup data, resulting in 75% losing some of their backups.[6]

21%
The number companies surveyed which said paying ransomware demands was excluded from their insurance policies.[8]

1 in 3
The number of organisations reporting have been successfully hit more than once by ransomware.[10]

Commvault from Ultima: A Great Defence

COMMVAULT

Using Commvault, your business can successfully manage the proliferation of your data across multiple platforms. Furthermore, you'll have the tools for broad protection, to monitor for early signs of attack to take preventative action, and to recover quickly.

With Commvault and Ultima, your organisation gains from a partnership that brings together expertise from two leading technology providers, which can find the right backup and recovery solution for your operation.

Learn more about how Commvault and Ultima can help ensure your business stays proactively protected in an evolving threat landscape. Contact Ultima today.
