

Flexible Working Assessment

Embrace the workforce evolution and benefit from cloud-like workspace experiences.

Departments, whether diverse or separated, collaborate to achieve shared goals despite challenges like different divisions, time zones, languages, and technical obstacles.

Our Flexible Working Assessment evaluates how well your current computer setup aligns with modern hybrid work practices. We assess both the end-user experience and the management of diverse corporate and personal devices, some of which are beyond traditional IT control.

Our goal is to help you discover how investing in technologies like Citrix DaaS, Windows 11, Windows 365, Azure Virtual Desktop, and Microsoft Intune can benefit your business.

85% of businesses noted productivity gains after the implementation of flexible working arrangements. 45% of employers claim it improves staff retention.

While 87% of staff reported they were performing fine at work, just 12% of leaders say they had full confidence that their teams were productive.

75% of hybrid workers said that their expectations for flexible working had increased in 2022 and 40% risk leaving their company if forced to return to the office.

“The IT systems staff use have a direct impact on how productive they can be, which in turn can affect your strategic objectives.”

The Workspace evolution

As hybrid working continues to penetrate the workplace, driven by a tech-savvy and highly dynamic workforce, organisations are being forced to review the way in which they provide end user computing services.

-  **Inefficient Tools** - Traditional endpoint management tools lack the efficiency gains introduced by modern counterparts, making general life-cycle tasks more time consuming.
-  **Security** - Not all endpoints have adequate security capabilities, leaving you vulnerable to attack. NextGen versions have built-in security which compliment a zero trust approach.
-  **Complex Needs** - Developers and temporary or fractional workers can often cause operational headaches, given their unique requirements in comparison to traditional staff.
-  **Scaling** - Mergers, acquisitions and divestiture can be time consuming and costly. Adopting NextGen endpoints, alongside cloud native management, significantly reduce issues.
-  **Flexibility** - Providing staff with the ability to do their best work from anywhere, on devices that are appropriate to their role can significantly increase productivity.
